

Curiosity Corridor

A simple and memorable illustration to guide questioning, inquiry, and curiosity when revealing, unpacking, and understanding metaphors created by participants during LEGO® SERIOUS PLAY® activities. While the illustration is optimised for exploring Individual Models, it can also be adapted for use with Shared Models and Landscape Models.

How to use it.

Use the Curiosity Corridor and its questions to navigate and explore a model created by an individual or a group.

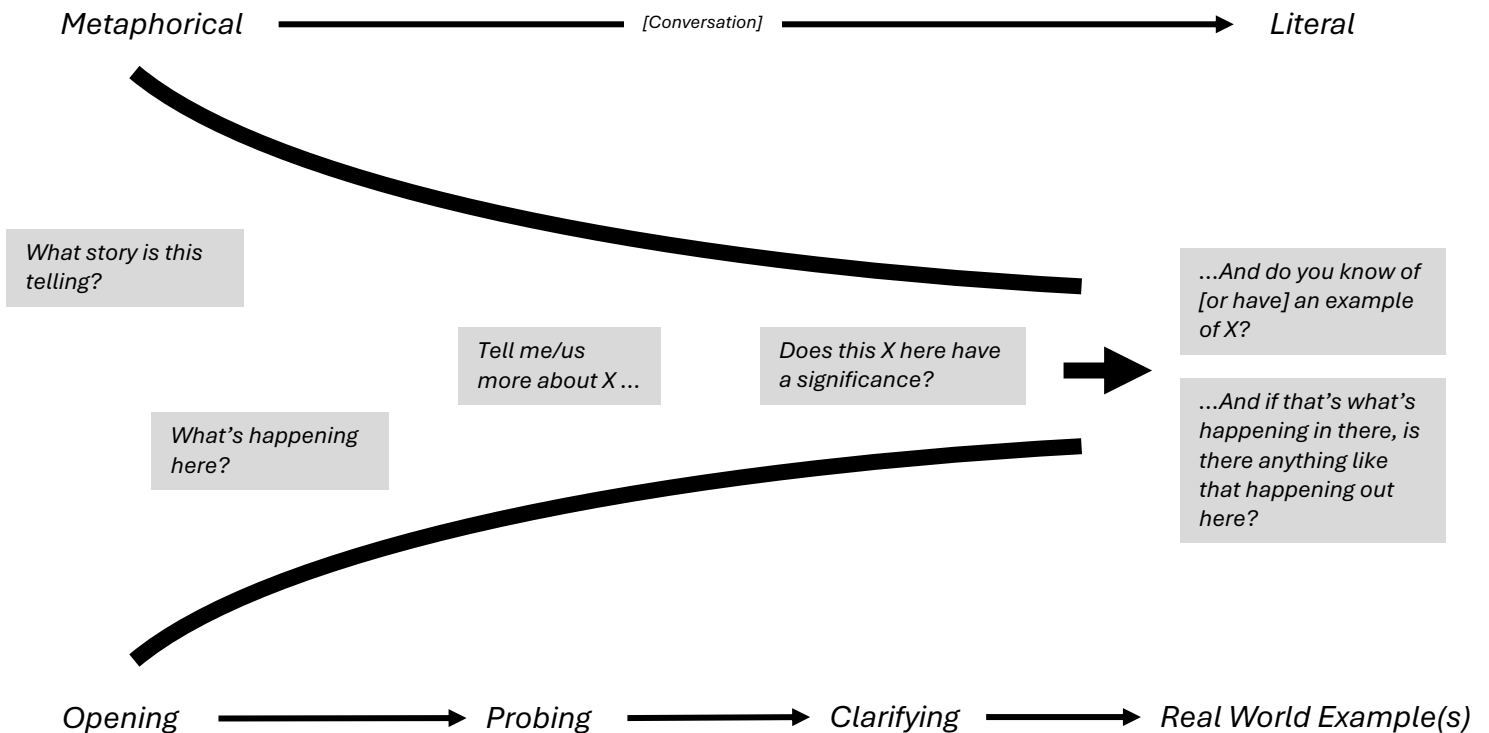

Start with the 'wider' opening questions on the left side of the corridor. These often surface metaphors.

As insights and metaphors are surfaced, move deeper into the corridor - probing and zooming in on specific areas, sections, or spaces within the model.

To uncover further insights, focus on particular points, parts, or bricks and clarify their significance, importance and any meaning.

With this understanding in place, shift the conversation from the metaphorical meaning of the model to the literal, with any real-world parallels using the Real World Example questions.

Finally, work with the individual or group to decide what happens next - whether that's deeper discussion and exploration, a concrete action or decision, or simply recognising that this new understanding is enough for now.
